Long Government/Credit Fixed Income Strategy Profile

September 30, 2026

STRATEGY OVERVIEW

The Sage Long Gov/Credit Fixed Income strategy seeks consistent risk-adjusted returns by investing primarily in a broad range of fixed income securities. The strategy focuses on maximizing income through a risk-managed, value-driven approach centered on delivering a portfolio that is diversified across multiple sectors, risk factors, and investment horizons.

INVESTMENT APPROACH

We believe that over complete market cycles, consistent returns are driven by income generation, value opportunities, and rigorous risk management practices. The keys to this process include:

- Generate a consistent income advantage by harvesting a diversified set of risk premiums: duration, credit, structure and liquidity.
- Capture value opportunities by taking advantage of market dislocations due to unexpected volatility or market inefficiencies.
- Actively manage portfolio-level risk to ensure alignment with investment outlook and client objectives.

INSTRUMENTS

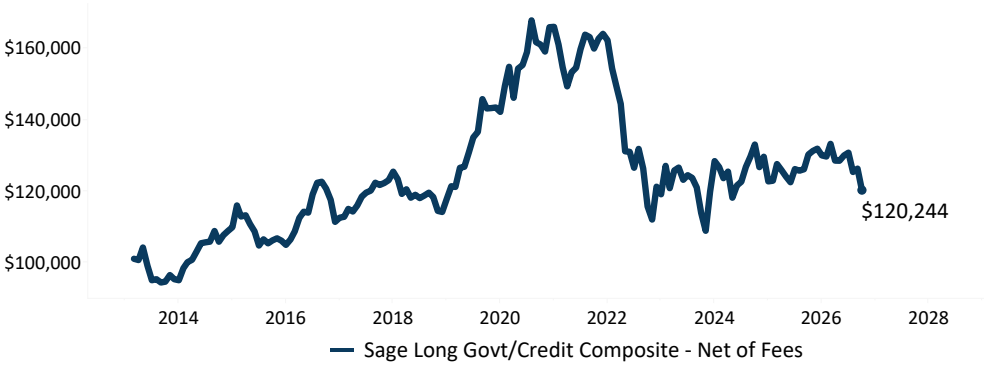

- U.S. Treasury debt
- U.S. Agency debt
- Investment grade corporate debt
- Mortgage and other asset-backed debt
- Foreign debt

Long Government/Credit Fixed Income Management Disclosures:

Compliance Statement: Sage Advisory Services, Ltd. Co. ("Sage") claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS standards. Sage has been independently verified for the period December 31, 2004 to December 31, 2025. The verification report is available upon request. A firm that claims compliance with the GIPS standards must establish policies and procedures for complying with all the applicable requirements of the GIPS standards. Verification provides assurance on whether the firm's policies and procedures related to composite and pooled fund maintenance, as well as the calculation, presentation, and distribution of performance, have been designed in compliance with the GIPS standards and have been implemented on a firm-wide basis. Verification does not provide assurance on the accuracy of any specific performance report.

Firm Information: Sage is a registered investment advisor based in Austin, Texas. Sage specializes in Fixed Income, Balanced and Exchange Traded Fund ("ETF") investment management for insurance companies and other financial institutions, Taft-Hartley organizations, endowments, foundations, non-profit institutions, corporations, defined benefit plans, healthcare institutions, family offices and high net worth individuals. Sage does not utilize leverage, futures, or options in any portfolios included in the composites. A list of composite descriptions, a list of limited distribution pooled fund descriptions, and a list of broad distribution pooled funds are available upon request.

Composite Characteristics: The Long Government/Credit Fixed Income Composite (the "Composite") consists of all non-wrap program discretionary, fee-paying accounts over $1,000,000 that are managed for a full month according to this style. The Composite contains accounts investing primarily in fixed income securities. The Composite creation date is April 1, 2023, and Composite inception date is February 1, 2013. The Composite includes accounts managed to the Bloomberg Long Government/Credit Index and custom long government/credit mandates within a 2-year duration of the benchmark. Not every client's account in the Composite will have the identical characteristics. The actual characteristics with respect to any particular client account may vary based on a number of factors, including but not limited to: (i) the size of the account; (ii) the investment restrictions applicable to the account, if any; and (iii) the market conditions at the time of investment.

Composite Fee: The gross investment results for the Composite presented herein represent historical gross performance with no deduction for investment management fees but net of all trading expenses. Net returns are net of all trading expenses and are calculated by deducting 1/12th of the highest management fee on a monthly basis from the monthly gross composite return. The model fee is 0.35%. The fee schedule for the Composite is as follows: 0.35% for the first $10 million; 0.25% for the next $15 million; and 0.20% for the balance over $25 million. Prior to 1/1/2020 the model fee was 0.40% and the fee schedule for the Composite was as follows: 0.40% for the first $10 million; 0.35% for the next $15 million; and 0.25% for the balance over $25 million. Actual fees may vary depending on, among other things, the applicable fee schedule and portfolio size. Please see Sage's Form ADV Part 2A for a full disclosure of Sage's fee schedules.

Composite Benchmark: Sage has reviewed the relevant universe of indices and has determined that the Bloomberg Government Credit Long Bond Market Index most closely resembles the Composite managed by Sage. The Bloomberg Government Credit Long Bond Market Index is a broad-based benchmark that includes investment grade, US dollar-denominated, fixed-rate treasuries, government-related and corporate securities.

Calculation Methodology: All valuations, gross, and net returns are based in U.S. Dollars and are computed using a time-weighted total rate of return. Periodic returns have been geometrically linked and annualized for all time periods longer than one year. Portfolio performance results include, and reflect, as applicable, the reinvestment of all interest, accrued income, cash, cash equivalents, realized and unrealized gains and losses. Policies for valuing investments, calculating performance, and preparing GIPS Reports are available upon request. Internal dispersion is the asset-weighted standard deviation of annual gross returns of those accounts included in the Composite for the entire year. If there are years whereby there are 5 or fewer accounts, the dispersion is N/A. The 3-year ex-post standard deviation measures the variability of the composite gross returns and the benchmark returns over the preceding 36-month period. If there are years whereby there are fewer than 36 monthly returns available, the 3-year annualized ex-post standard deviation of this composite and its benchmark is N/A.

Risk Disclosures: Actual performance results may differ from Composite returns, depending on the size of the account, investment guidelines and/or restrictions, inception date and other factors. Past performance is not indicative of future returns. As with any investment vehicle, there is always the potential for gains as well as the possibility of losses.

Statistical Definitions: Standard Deviation: a gauge of risk that measures the degree of dispersion of a portfolio's returns relative to its mean; R-Squared: the correlation coefficient of a regression analysis. This measurement represents the degree of correlation between the portfolio and its respective index. An R-Squared of 1 represents a direct correlation, and an R-Squared of –1 represents a negative correlation; Alpha: measures nonsystematic return, i.e. value added by manager due to security selection; Beta: measures the volatility of the portfolio in comparison with the market index as a whole; a beta of 1 indicates the portfolio moves with the market index; Information Ratio (IR): the ratio of the active return of the portfolio divided by the tracking error of its return, with both components measured relative to the performance of the benchmark; Tracking error: the standard deviation of the difference between the returns of an investment and its benchmark.Information contained in this document (other than Sage's performance information) has been obtained from sources believed to be reliable but not guaranteed.
