SAGE | INVEST WITH WISDOM™

Who We Are

- Founded in 1996 — Based in Austin, Texas
- 100% employee operated
- 17-member investment team has an average industry experience of 18 years

Who We Serve

Why Sage

Agility

Our size and independence as an employee-controlled firm enable us to take a nimble approach.

Alignment

We customize the investment experience to align with each client's unique objectives and needs.

Consistency

We have a tenured investment team and proven process that enable us to deliver expected results.

Culture

We are committed to cultivating a culture of service and trust among our clients, our employees, and our community.

*AUM/AUA as of 9/30/2026. ** "Who We Serve" is client type by AUM/AUA.

ETF Strategies Overview

	Strategy	Time Horizon Years	Target Allocation*	Objective
Growth	Global Equity	10-plus	100% Equity	Focus is on capital appreciation. Investors have a longer time horizon and a higher tolerance for short-term volatility.
	Growth	7-10	80% Equity/20% Fixed Income	
	Moderate Growth	5-7	60% Equity/40% Fixed Income	
Stability	Moderate	3-5	40% Equity/60% Fixed Income	Focus is on capital appreciation and stability of returns. Investors have a short to medium time horizon, and have a lower tolerance for short-term volatility.
	Conservative	1-3	20% Equity/80% Fixed Income	
Income	Multi-Asset Income	2-5	20% Equity/80% FI and Hybrids	Focus is on income and stability of returns. The time horizon is short to medium term, and investors have a low tolerance for short-term volatility.
	Tax Aware MAI	2-5	20% Equity/80% FI and Hybrids	
	Core Plus	1-3	100% Fixed Income	

**Actual allocation may vary based on market conditions.*

Asset Allocation Strategies

Flexible Approach	*Broad Asset Class*	+/- 20% from equity/fixed income allocation target
	Equity/Alternatives	Carry up to 60% in cash and alternative asset classes combined
	Fixed Income	Utilize entire global bond market, up to 40% non-core segments

Strategies & Services

ETF Strategies

Asset Allocation
target-risk allocation strategies designed to be core solutions

Income Solutions
income strategies balance maximizing yield versus volatility

ETF Implementation
experience managing strategies using ETFs since 1998

Investment Philosophy

Top-Down View
drivers include macro, policy, valuation, and sentiment

Flexible
dynamic market segment allocation based on 3–6 month outlook

Risk Management
risk budgeting and stress testing are core to process

Investment Approach

Team Integration
Investment Committee, Portfolio Management, & Research

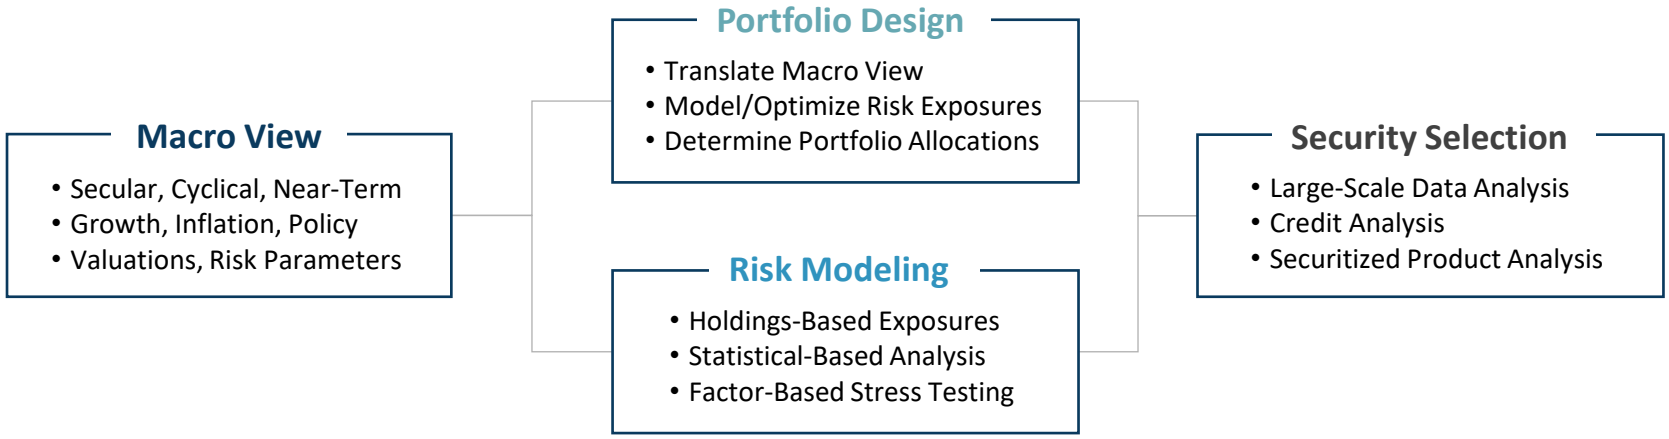

ETF Evaluation
sponsor, cost, exposure, along with factor/security composition

Portfolio Design
express macro view with portfolio design and risk management

Our Approach

Investment Process

Our teams work together to balance the development of our macro views with thoughtful portfolio design, value-driven security selection, and active risk management.

3Q26 Market Review & Outlook – October 2026

SAGE
INVEST WITH WISDOM

Quarter in Review

It was a challenging quarter for investors, with returns driven by a significant repricing of interest rates. Stronger economic data during the quarter worked against returns, as it was paired with sticky inflation and concerns around the rising cost of capital, growing deficits, and heavy supply. The result was a more hawkish shift in monetary policy: the Fed hiked in September and signaled that more may come. Yields rose meaningfully, climbing 60–90 basis points across the Treasury curve.

From an asset class perspective, bonds felt the most direct pain, with the Aggregate Bond Index returning -3.5% for the quarter, its worst quarter since the 2022 hiking cycle. Equities posted modest gains, with the U.S. outperforming (S&P 500 +2.3%; ACWI ex US +0.5%), while commodities led returns on a resurgence of oil (diversified commodities +15%).

Within equities, the resilience of the broad indices, especially in the U.S., masked narrow breadth and underlying weakness. A small group of mega-cap growth and AI beneficiaries drove index returns higher (mega caps +5.5%), while most sectors struggled. Eight of 11 sectors were negative. Rate-sensitive sectors (utilities –12.4%, financials –8.8%) and cyclicals (consumer discretionary –7.0%) saw sharp drawdowns. Further, small-cap weakness (S&P 600 –8%) pointed to both rate pressure and risk aversion.

Fixed income returns were negative across nearly all sectors, as elevated income could not absorb the rapid adjustment in rates. Duration was the dominant driver and pushed most indices into negative territory. Short and intermediate proxies held up better (short gov/credit –0.2%, intermediate gov/credit –1.0%). Credit returns were negative because of duration, but spreads stayed resilient, widening only 6–8 basis points as yield buyers continued to absorb record supply. MBS lagged given its rate sensitivity and higher rate volatility. Non-core sectors offered limited protection, and duration-sensitive markets, such as dollar EM and preferreds, fell 5–6%, more than the broad market, while higher-income, lower-duration segments fared better (high yield –2%; loans +1.5%).

Macro Outlook & Positioning

Macro dynamics shifted in the third quarter as investor sentiment and valuations adjusted to a stronger-than-expected economy, a less predictable inflation path, and a structurally higher cost of capital. Economic data consistently surprised to the upside, supported by still-firm consumer spending, healthy labor markets, and continued business investment. That strength gave the Fed room to take a more restrictive path. As a result, Treasury yields moved higher across the curve, as investors demanded compensation

EQUITY ALLOCATION PERFORMANCE

Contributors
- Software Sector
- U.S. Large Cap Growth

Detractors
- Industrials Sector
- Banks Sector

Sticky inflation and concerns around the rising cost of capital, growing deficits, and heavy supply injected uncertainty into the equity path during the quarter. Within equities, the resilience of the broad indices, especially in the U.S., masked narrow breadth and underlying weakness. A small group of mega-cap growth and AI beneficiaries drove index returns higher, while most sectors struggled. Rate-sensitive sectors and cyclicals saw sharp drawdowns. Further, small-cap weakness pointed to both rate pressure and risk aversion.

The strategy posted a slightly positive return for the quarter, with technology-oriented sectors, most notably software, leading the way. Cyclicals sold off during the quarter, with banks and industrials as the biggest detractors to performance.

Notable Portfolio Adjustments During the Quarter
- Increased International DM
- Reduced Large Cap Growth/Consumer
- Reduced Equities Exposure in Asset Allocation Models

FIXED INCOME ALLOCATION PERFORMANCE

Contributors
- Leveraged Loans
- CLOs

Detractors
- Long Treasuries
- Mortgaged Backed Securities

It was a challenging quarter for investors, with returns driven by a significant repricing of interest rates. The Federal Reserve embarked on a rate-hiking cycle in September and signaled that further increases may follow. Fixed income returns were negative across nearly all sectors, as elevated income could not absorb the rapid adjustment in rates. However, corporate credit spreads remained stable despite the outsized supply from corporate issuers.

The fixed income strategy posted a negative return for the quarter, with overweight positions in MBS and long Treasuries detracting from performance, owing to their higher rate sensitivity. Bank loans and CLOs were positive for the quarter due to their low duration and a stable credit spread environment.

Notable Portfolio Adjustments During the Quarter
- Increased Securitized
- Exited Intermediate/Long IG Corporates
- Increased Fixed Income Exposure in Asset Allocation Models

OUTLOOK & CURRENT POSITIONING

- Strong economic data suggest growth should remain solid, though signs of strain are emerging as labor market data softens. Inflation remains the Fed's primary focus, but policy adjustments are more likely to be modest than aggressive. We believe any further Fed tightening will be limited, with expectations already reflected in current yields. The reset in yields has materially improved the outlook for forward returns. Higher yields give investors more income, more compensation for uncertainty, and a larger cushion against future rate volatility.
- We remain overweight equities relative to fixed income. We are also tilted toward the U.S., given greater inflationary pressures from energy prices in Europe and Asia, and we carry a more diversified sector mix.
- Following the sharp repricing, we maintain full duration across our fixed income strategies and continue to be defensive within our credit allocation, emphasizing income generation, opportunities at the issuer and industry levels, and greater diversification across high-yield corporate bonds and securitized markets, where valuations are more compelling.

Asset Class Views

Equities vs. Fixed Income

We carry an overweight in equities vs. fixed income. Given our base case that the U.S. will avoid a recession and benefit from strong earnings and an AI-driven spending cycle, we see relative upside potential in equities compared to bonds.

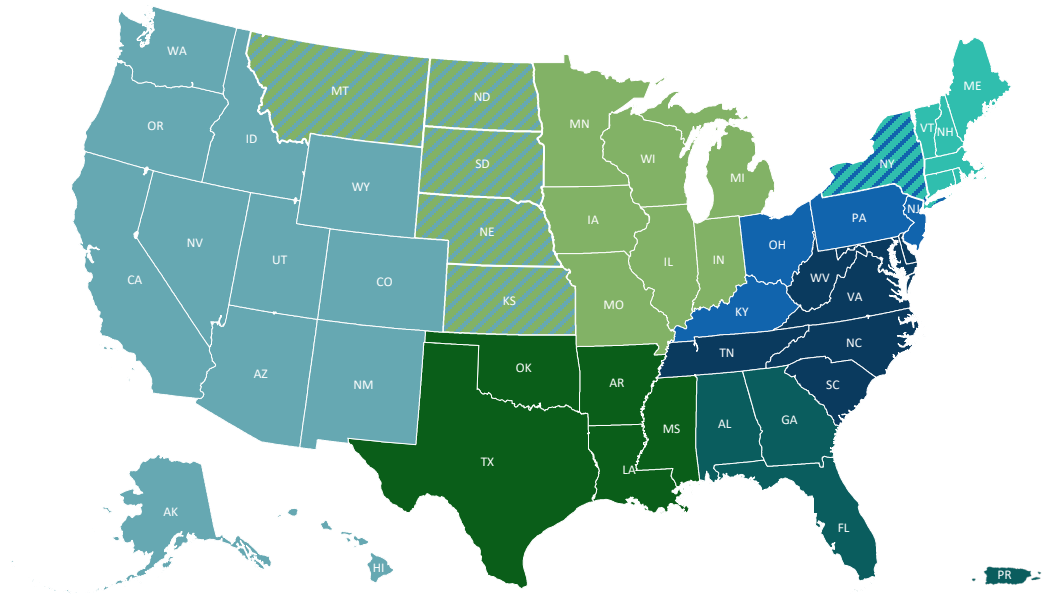

Equity	View	Reasoning
U.S. Equities	▲	We carry a modest overweight in U.S. equities relative to international markets. The U.S. continues to have larger near-term tailwinds with a stronger earnings outlook, capex trends, and economic momentum. Stretched valuations vs. most other regions and policy uncertainty keep our overweight small.
Developed International	▼	After a strong start to the year in developed markets, we moved to an underweight, seeing better risk/reward in the U.S. Despite progress with Iran, Europe and other energy importers will likely feel the Q1 energy shock drag longer than the U.S. Additionally, core Europe has less technology and AI exposure, limiting earnings growth and margin expansion relative to the U.S.
Emerging Markets	–	We maintain a neutral allocation to EM as valuations are attractive and there is growth upside in India and parts of Asia and LATAM. This is countered by structural weakness in China and elevated macro and geopolitical risks globally.
Style/Sector/ Factor	–	In addition to tilts toward large-cap growth sectors, we carry increased exposure to banks, industrials, and healthcare, where improving earnings breadth, attractive relative valuations, and diversified return drivers provide a compelling complement to technology and AI-related exposures.

Fixed Income	View	Reasoning
U.S. Treasuries	▼	We are underweight Treasuries overall, with a tilt toward long-end curve exposure. Longer duration Treasuries provide an offset to our spread overweight and help us maintain an overall long duration posture at the portfolio level. The hawkish pivot recently has caused more movement at the front end of the curve, and we remain convinced in carrying a long duration position as inflation fears fade.
Investment Grade Credit	–	Market weight-type exposure still makes sense in IG credit given strong fundamentals and demand for yield, but full valuations. Rather than take a large overweight in IG spread risk, we continue to enhance our spread overweight position and overall yield with non-core sectors and increased MBS exposure.
Securitized	▲	We continue to like the agency mortgage sector from both a relative value and macroeconomic standpoint. Mortgages offer attractive yields to Treasuries and IG credit without the credit risk and should benefit from lower rate volatility. We have increasingly skewed exposure toward actively managed ETFs as issuer and structural selection are an important excess return driver within securitized markets.
Non-Core Fixed Income	▲	We believe a moderate allocation to non-core assets is appropriate to diversify sources of yield and return. Given tight U.S. credit spreads, we have less high yield and loan allocations in favor of increased preferred stock and high-income securitized exposure.

The Global Asset Allocation ETF strategies invest in exchange traded funds (ETFs). Investors should consider funds' investment objectives, risks, charges, and expenses carefully before investing. The investment return and principal value of an investment will fluctuate, so that an investor's shares, when redeemed, may be worth more or less than their original cost. ETFs trade like stocks and may trade for less than their net asset value. Different types of investments involve varying degrees of risk, and there can be no assurance that any specific investment will either be suitable or profitable for a client's investment portfolio.

Sage Advisory Services, Ltd. Co. is a registered investment adviser that provides investment management services for a variety of institutions and high net worth individuals. For additional information on Sage and its investment management services, please view our web site at www.sageadvisory.com, or refer to our Form ADV, which is available upon request by calling 512.327.5530.

The historical asset allocations and portfolio changes ("Portfolio Changes") are based on model portfolios and actual changes made to specific investment platform and/or client portfolios or model portfolios may vary based on investment guidelines requested by each such investment platform and/or client. There is no assurance, as of the date of publication, that the securities purchased, as a result of the Portfolio Changes, remain in the model portfolios or that securities sold have not been repurchased. Additionally, it is noted that the securities purchased as a result of the Portfolio Changes may not represent the entire model portfolio. It should not be assumed that recommendations made in the future will be profitable or will equal the performance of the model portfolios or the strategies discussed herein. With respect to the model portfolios, a complete list of all recommendations made by Sage over the previous twelve (12) month period will be made available upon request.
